Variable/Operation Cards

Use scissors to cut along the dotted lines. Rearrange the 4 variable cards (M , F , Δt and ΔV) and as many of the gray operation cards as needed to identify the mathematical relationship that you think connects these variables together. Once you agree with your partner on the mathematical relationship, use the average values obtained from our investigation to test if the two sides of the equation you identified are equal.

(M)	(Δt)	+
(F)	(ΔV)	+
$\times$	-	+
$\times$	-	$\div$
$\times$	-	$\div$
=		$\div$
